What is Natural Gas?

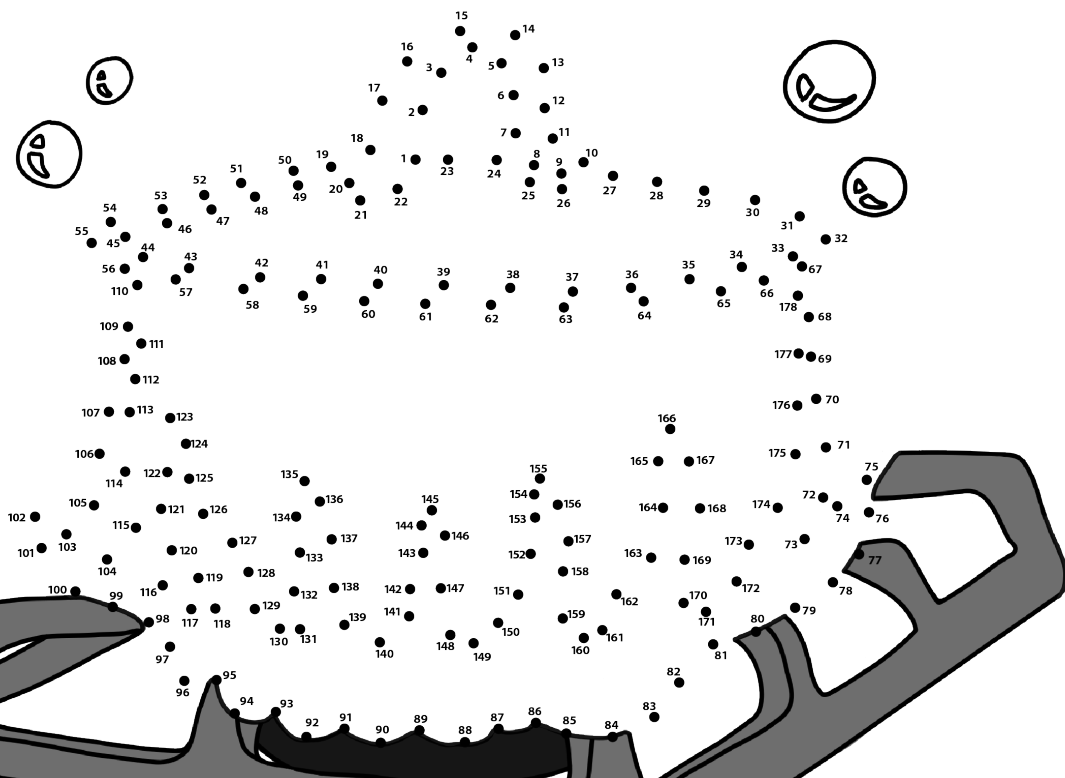

Natural gas is a type of fuel that comes from deep underground. It's made from the remains of plants and animals that lived a very long time ago. It is a mix of different gases, but the one that makes up a majority of natural gas is **methane**.

Natural gas is pulled from the earth, processed at a plant, and delivered to buildings and homes through underground pipelines. **People use natural gas to heat their homes, cook food, and make electricity**, powering many things we use every day!

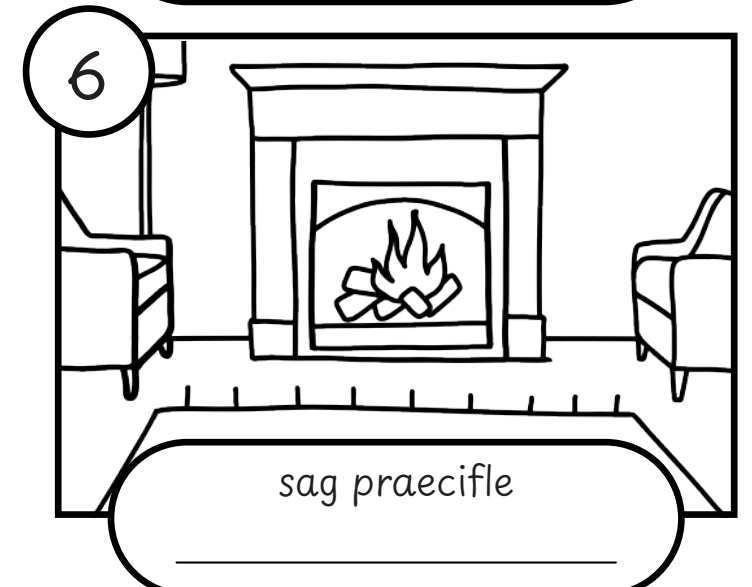

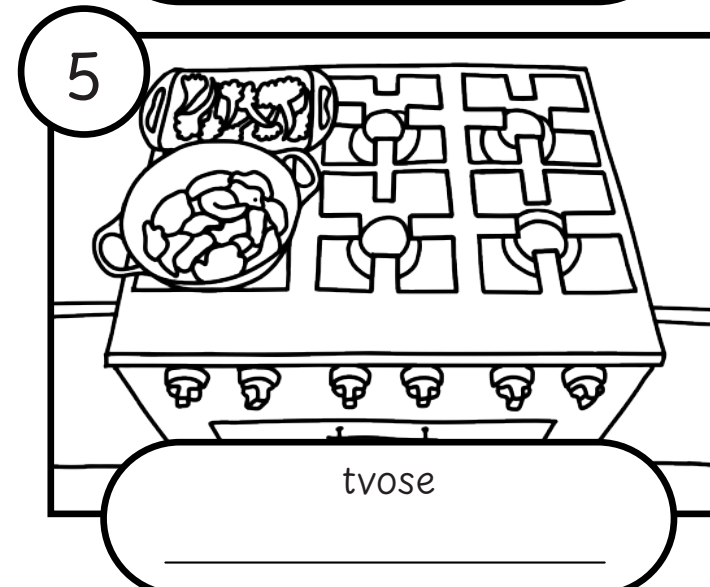

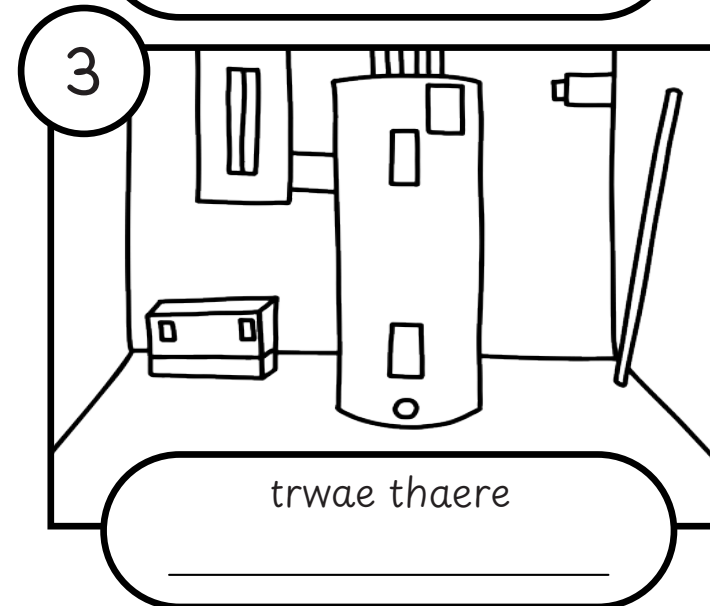

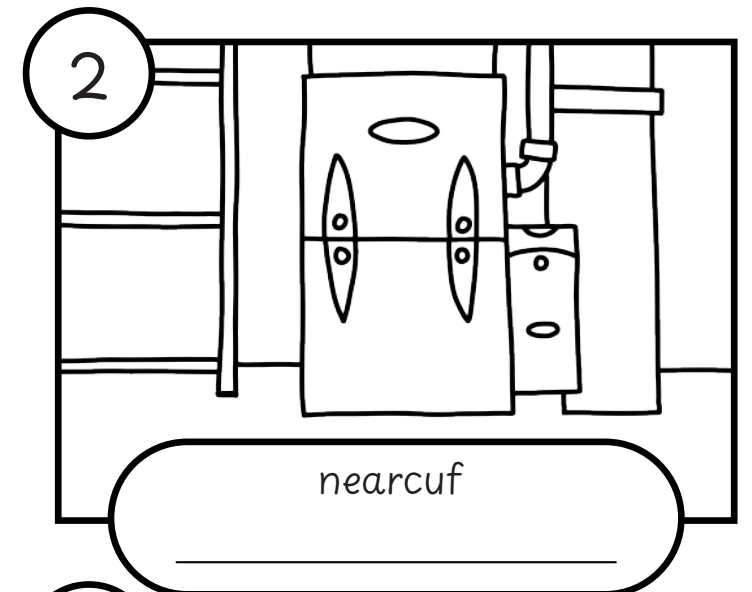

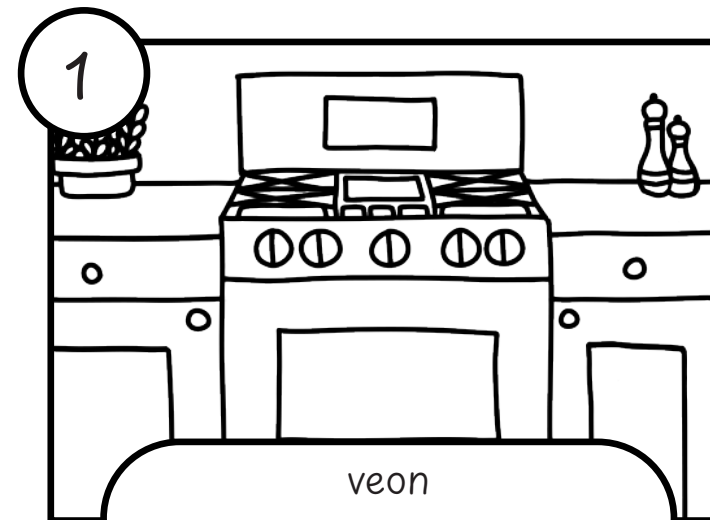

Connect the Dots!

Can you connect the dots to uncover a scene showing natural gas at work?

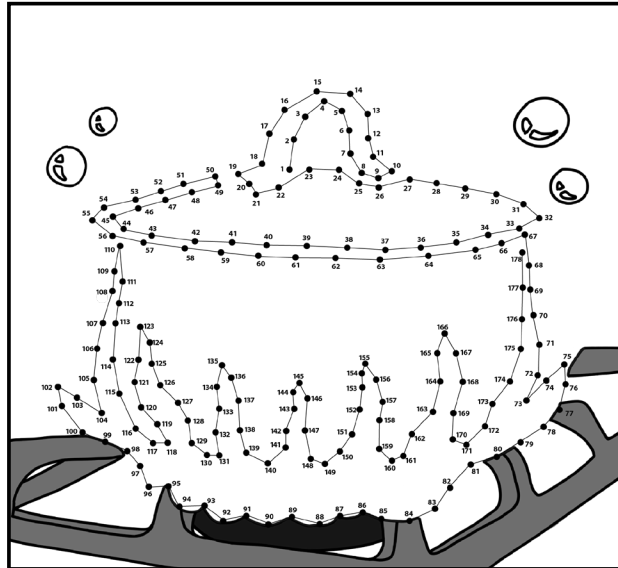

Unscramble!

Can you unscramble these natural gas appliances that may be found in your home?
